Network Management Services

With over 30 years of experience working with school districts, ACES has developed a relationship-oriented approach. We understand the unique needs of schools and working with student data. Our staff bring a broad base of experience. ACES can provide system and network administration and evaluation of current infrastructure including:

- Routine audit of applications and network: Identify potential security vulnerabilities with the system infrastructure design

- Secure infrastructure: OS and application upgrades, latest patches, firewall intrusion prevention of systems and network (both internally and externally)

- Active Directory and Group Policy Management: Assess best practices, consolidate and implement group policies

- Server and application installs and assessment: Radius, IIS, SSL, SQL, Database backup, Security

- System and network documentation: documentation with diagram overview

- Assist in integrating classroom technology – Assess current practices and provide teacher training

- G Suite Administration: Implementation and management

- Office 365 Implementation: Migration from exchange

- Exchange Server: Upgrades and maintenance

- Anti-Virus: Deployment and removal at enterprise level

- Increase and change network IP schema

- Technical support and management for projects

- VMWare administration
